

Sustainable Procurement Policy

Tata Motors Limited is committed to embedding Environmental, Social, and Governance (ESG) principles into our procurement process to achieve our sustainability ambitions on Net Zero, Circular Economy, and Nature Positive outcomes, while managing supply chain risks.

Towards this end, we will:

- Create awareness of Tata Motors' Sustainability Policy and Responsible Value Chain Partner Code of Conduct amongst supplier partners, contractors and service providers through ongoing training, communication, and collaborative platforms
- Adopt ESG performance as a fundamental criterion in supplier evaluations, complementing traditional measures like quality, cost, and delivery
- Encourage supplier partners to protect, restore and regenerate natural habitats
- Uphold human rights, safe working conditions, and fair labor practices in the supply chain in line with responsible value chain partner code of conduct
- Support supplier partners that foster diversity and inclusivity and promote local sourcing by providing guidance
- Ensure transparency, ethics, and compliance in procurement processes
- Require supplier partners to disclose on ESG practices with appropriate metrics, proactively manage risks within their supply chain, and demonstrate continuous improvement
- Build resilient supply chains by reducing dependencies on materials with high ESG risks

Tata Motors Limited will deliver the above by embedding sustainability criteria into supplier selection, contracting, and performance evaluation. We will collaborate with supplier partners to innovate low-carbon, circular, and nature-positive supply chains, that create shared value and minimize systemic risks.
